# Eric Askew

easkew81@yahoo.com | linkedin.com/in/easkew51 | github.com/Moonwalker5823 | ea-portfolio-khaki.vercel.app

## Summary

Full-stack engineer building production web apps with TypeScript, React, NestJS, Laravel and Vue.js, currently on the deal lifecycle of a physical commodity trading platform at Commod. Works spec-first with AI agents: OpenSpec proposals reviewed before code, Claude Code for implementation, automated quality gates before every push. Former NYC audio engineer.

## Skills

| | |
|---|---|
| **Languages** | TypeScript, JavaScript (ES6+), PHP, SQL, GraphQL, HTML, CSS |
| **Frameworks** | React 19, NestJS, Node.js, Express, Vue.js, Laravel, Next.js, Redux, TanStack Query, Tailwind CSS |
| **Data & cloud** | PostgreSQL, MySQL, MongoDB, Redis, Socket.IO, AWS S3, Vercel, Railway |
| **AI & workflow** | Claude Code, OpenSpec, spec-driven development, agentic code review, Claude/OpenAI APIs, Copilot |
| **Testing** | Jest, React Testing Library, Cucumber, SuperTest, Mocha |
| **Practices** | REST API design, Agile/Scrum, CI/CD, performance optimization, responsive UI |

## Experience

**Commod** | Full-Stack Engineer — Jul 2026 – Present

Physical commodity trading platform: negotiation, contracts, compliance and settlement

- Build the deal lifecycle end to end, from React 19/TypeScript screens to NestJS, PostgreSQL and Redis services
- Built settlement reconciliation that checks a short delivery against the contract terms the deal was agreed under
- Built deal gates that hold a deal at the correct stage and tell both counterparties exactly what is blocking it
- Ship spec-first with OpenSpec and Claude Code, behind a self-built pre-push gate: lint, types, unit tests, a seeded end-to-end run and an AI review against team standards

**Hemmings / American City Business Journals** | Software Engineer — 2022 – Apr 2026

Production auction platform for the classic-car marketplace

- Built full-stack features with Laravel, Vue.js and MySQL on an auction platform serving thousands of users
- Designed and built a max-bid system that automatically places incremental bids up to a user-defined limit
- Built the bidding and checkout components and modals
- Led a membership upsell flow in checkout that increased conversion; owned features from concept to deployment

**BeamQL** | Co-Creator, Software Engineer — 2021 – 2022

- Open-source tool that generates a GraphQL schema and resolvers over an existing REST API without touching its endpoints
- Built the react-flow schema diagram in React (tested with React Testing Library) and the Node.js/Express server

## Projects

- **Veganish Cafe**, client site veganish-one.vercel.app: site for a Bridgeport, CT cafe with online ordering and structured data for local search.
- **DigiHeart** digiheart.vercel.app: memorial platform with JWT auth, S3 media and admin approval. React, Express, MongoDB.
- **VibeList** vibelist-psi.vercel.app: Claude API reads a mood, Last.fm returns a playlist, the UI re-themes. React, Node.js.
- **TradeRoots** traderoots.vercel.app: interactive guide to global commodity markets. React, Recharts.
- **TruckStar** erictruckstarfoodfinder.vercel.app: food trucks on a live map with Google Places and Leaflet.

## Prior experience

**FPWA**, Facilities Coordinator, 2018 – 2021. Conference-center AV and IT support.

**Quad Recording Studios**, Audio Engineer, 2010 – 2015. Sessions for Jamie Foxx, T.I., KRS-One.

## Education & talks

**Codesmith**, Software Engineering Residency

**School for Audio Engineering**, Certified Audio Engineer

**Virginia State University**, Audio Engineering/Business coursework

**Talk:** Adventures in Deno.land, Single Sprout Speaker Series
